Navigation map — Mobile application

Project: Electricity Consumption Monitor — EnergyMonitor **Record:** 3145556 — Software Analysis and Development (ADSO), SENA CIES Regional Huila **Version:** 1.1 (October 27, 2026: legal window at registration, Bluetooth linking, home transfer and deletion, Activity tab, `/homes` redirects to the dashboard; the app has no administration)

---

1. Map 1 — General flow

Walks through the application from startup to log out, showing session restoration, the authentication guard and the side menu destinations.

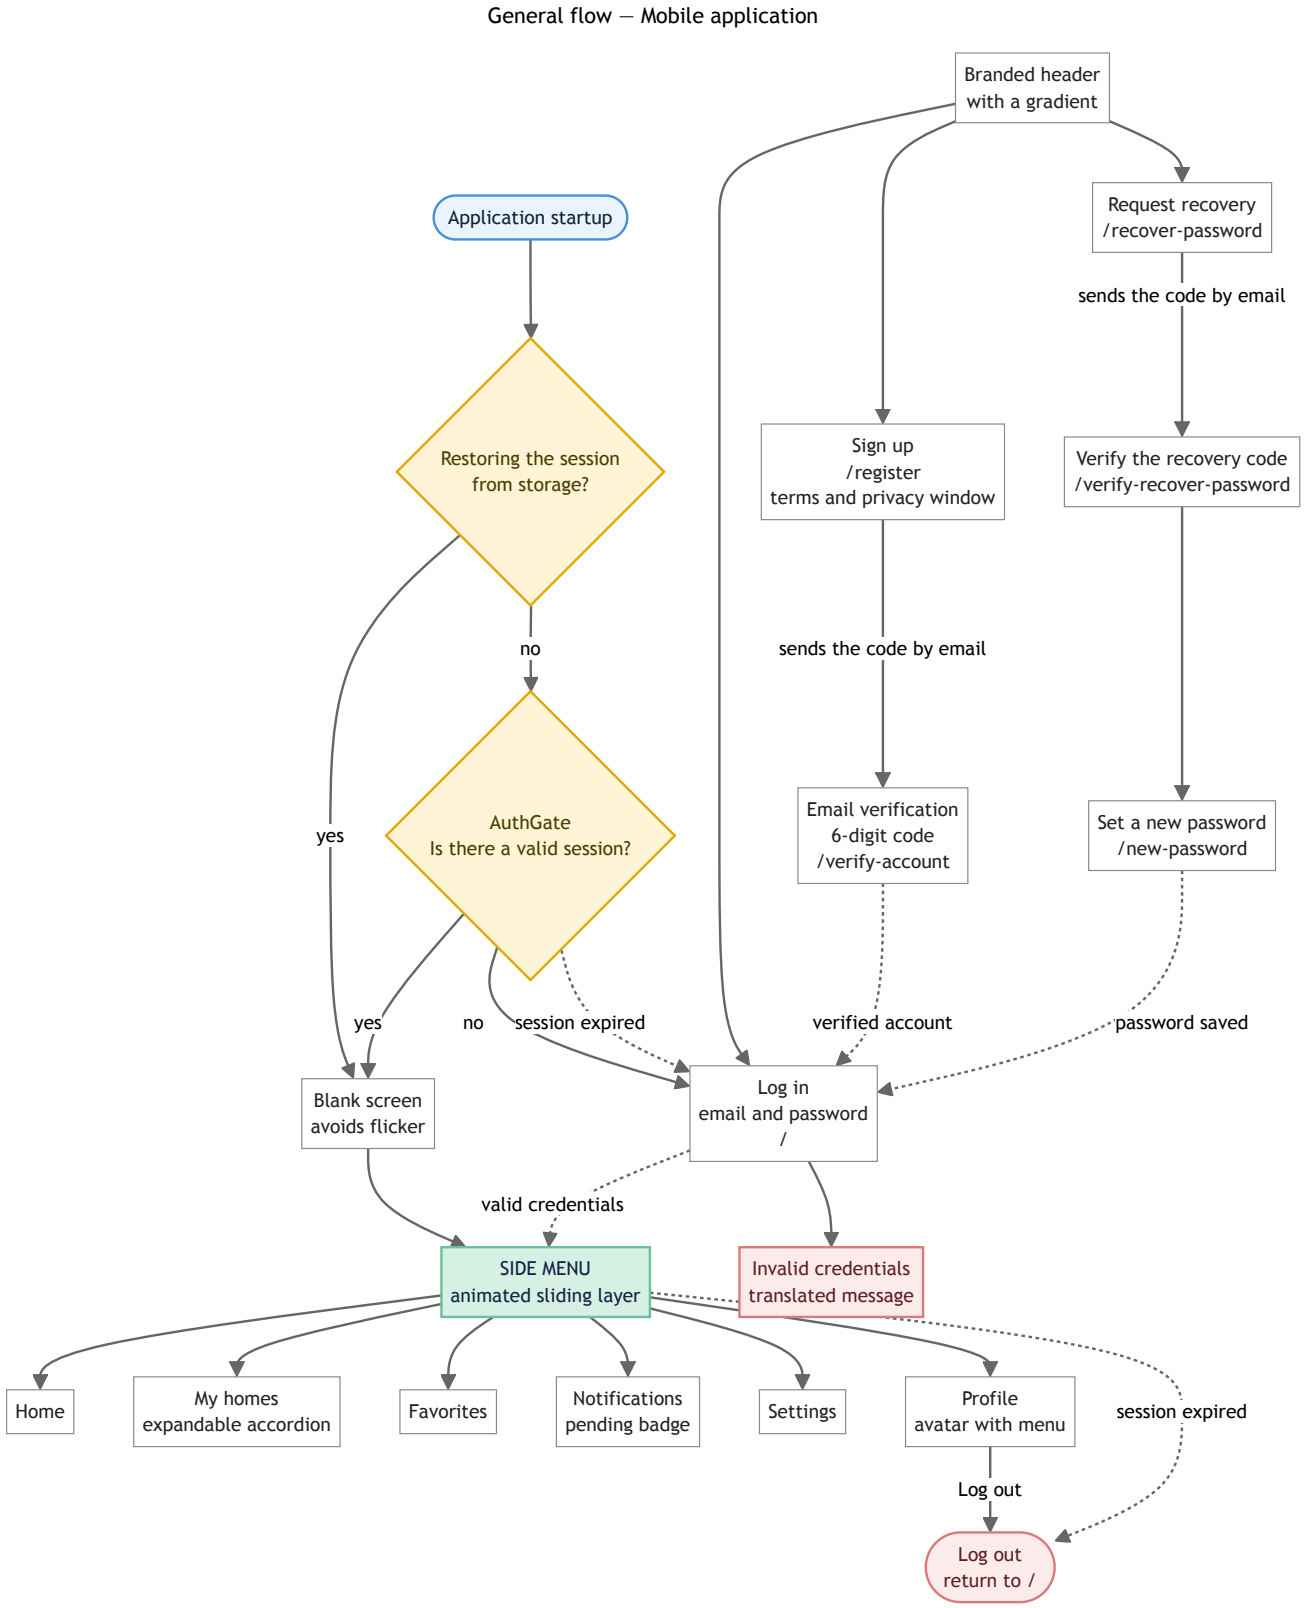

Figure 1. Download PNG image

2. Map 2 — Main panel and home detail

Details the main screen and the six sections of a home detail, with the actions that the role allows.

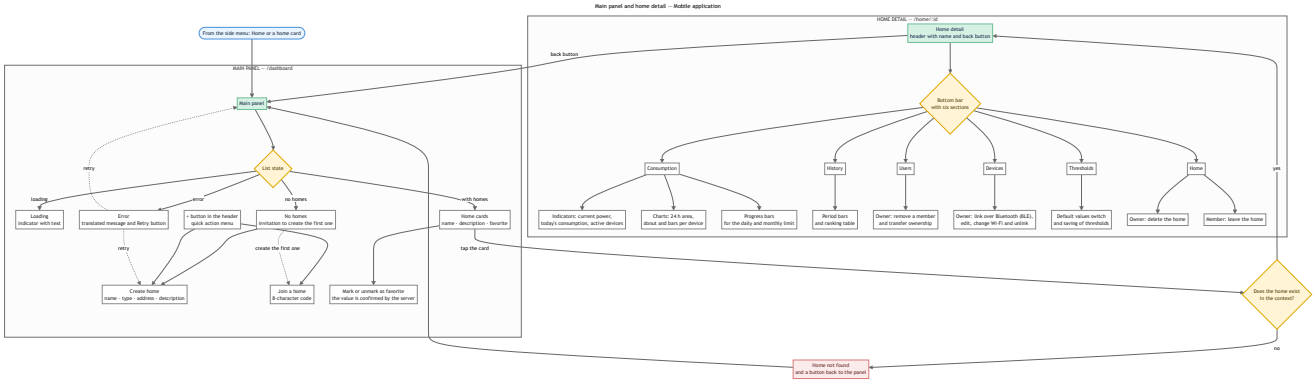

Figure 2. Download PNG image

3. Map 3 — Auxiliary screens

Details the favorites, notifications, settings and account screens.

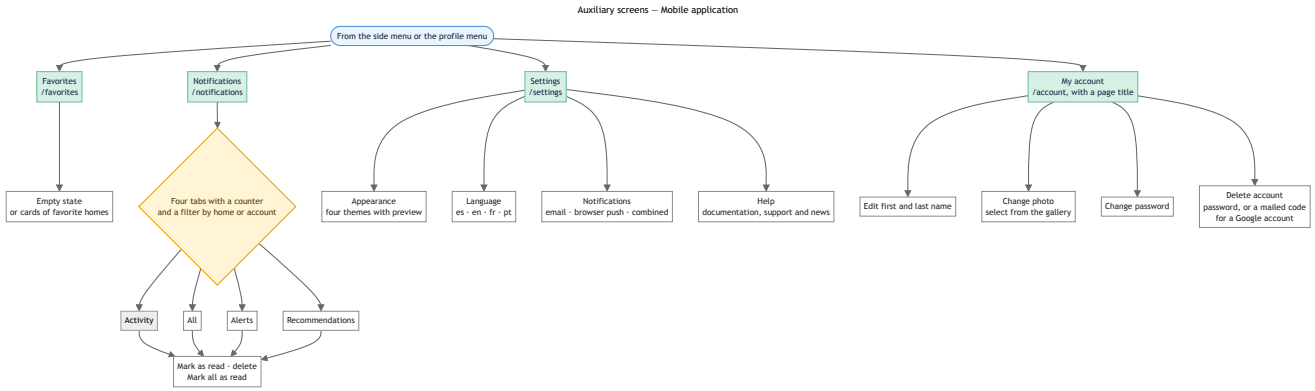

Figure 3. Download PNG image

4. How to read the maps

Symbol	Meaning
Rounded blue node	Entry point
Green node	Module or main area of the application
White node	Screen, section or specific action
Amber node	Navigation guard or state decision
Red node	End of flow or access error
Solid arrow	Direct navigation
Dotted arrow	Return, retry or log out

5. Navigation control points

Control point	Behavior
`AuthGate`	Wraps the whole stack. Defines six public routes; any other one requires a session
Session restoration	While reading the session from storage it renders nothing, to avoid flicker
Expired session	The HTTP client **does not** navigate: it warns the guard, which returns to the log in screen

Control point	Behavior
Detail back button	If the stack has a previous screen, it goes back; if the entry was through a direct link, it returns to the panel
`OWNER` or `MEMBER` role	The detail receives the role and shows or hides the management actions
Parameters between screens	The email travels in the URL (`?email=`); the recovery code travels in memory, not in the URL

6. Routes

Zone	Route	Screen
Public	`/`	Log in
Public	`/register`	Sign up
Public	`/verify-account`	Email verification
Public	`/recover-password`	Request recovery
Public	`/verify-recover-password`	Verify the recovery code
Public	`/new-password`	Set a new password
Private	`/dashboard`	Main panel
Private	`/homes`	Redirects to `/dashboard` (no longer a screen)
Private	`/home/[id]`	Home detail
Private	`/favorites`	Favorites
Private	`/notifications`	Notifications
Private	`/settings`	Settings
Private	`/account`	Account

Total: 13 routes · 12 functional screens. The app has no landing page and no administration screens.

7. Side menu structure

Order of the items, from top to bottom:

Position	Item	Destination
Header	Logo and application name	—
1	**Home**	`/dashboard`
2	**My homes** — accordion with the list of the user's homes	`/home/:id`
3	**Favorites**	`/favorites`
4	**Notifications** — with a pending badge	`/notifications`
5	**Settings**	`/settings`
Footer	**Profile** — avatar and name	My account · Sign out

The layer opens with a fixed button in the top left corner and closes when the darkened backdrop is tapped or with Android's back button, with a 300 millisecond animation. When closed, it is hidden from the screen reader.

8. Differences with the web navigation

Aspect	Web	Mobile
Welcome page	Yes (`/home`)	No: it opens at the log in screen
Password recovery	2 routes	3 routes

Aspect	Web	Mobile
Account screen	`/account` screen inside the protected zone	Dedicated screen (`/account`) with a title
Administration	Yes (`/admin/users`, ADMIN role)	No
Side menu	Fixed or collapsible	Sliding layer with a 300 ms animation
Detail sections	Top horizontal tabs	Bottom bar with icons
Device registration	Web Bluetooth (Chrome or Edge)	Native phone Bluetooth (BLE)
Total routes	16 + not found page	13
