Annex F. Diagrams

Version 1.0 · October 28, 2026. Diagrams in Mermaid, which GitHub draws directly in the browser. They show the system as it is in production.

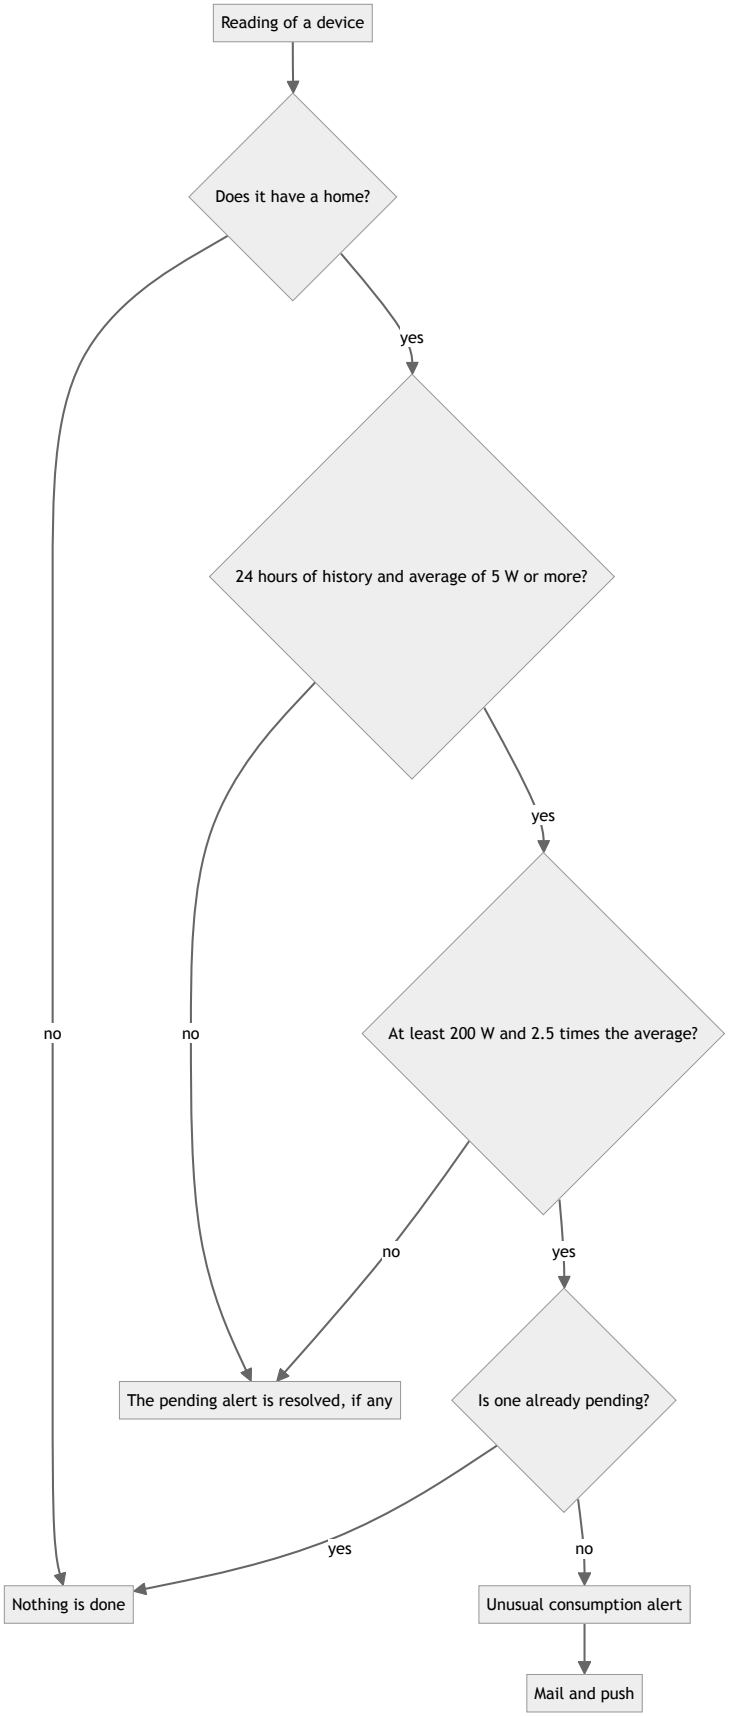

1. Architecture

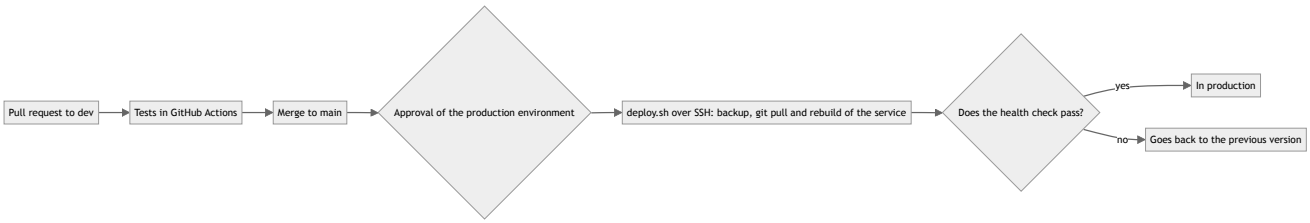

2. Journey of a reading

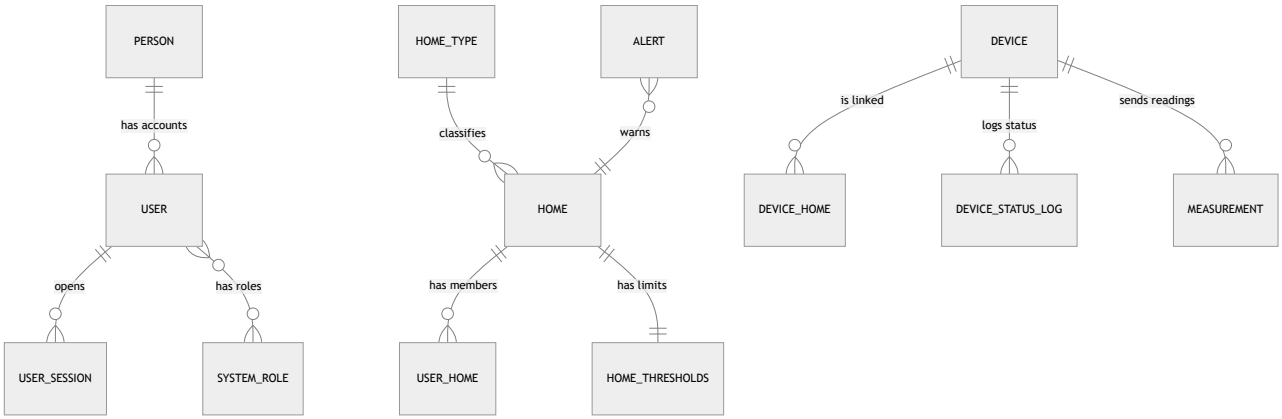

3. Unusual consumption rule

4. Continuous deployment

5. Main tables per service

Each service owns its tables and there are no foreign keys between services: the relations of the diagram that cross services (for example, the reading and its device) are resolved by identifier and by the internal API.
