Navigation maps

Project: Electrical Consumption Monitor — EnergyMonitor **Record:** 3145556 — Software Analysis and Development (ADSO), SENA CIES Regional Huila **Version:** 1.1 (October 27, 2026)

1. Contents

Each application is documented with **three maps**, plus the navigation control points; the web has a fourth map with the administration.

Document	Map 1	Map 2	Map 3	Map 4
`web-navigation-map.md`	General flow: entry, public zone, guards (guest, session and ADMIN role) and side menu destinations	Dashboard, states and the six sections of the home detail	Favorites, notifications (four tabs), settings and My account	Administration: users, status, role, notices and administrator settings
`mobile-navigation-map.md`	General flow: launch, session restore, guard and side menu destinations	Main panel, states and the six sections of the home detail	Favorites, notifications (four tabs), settings and the account screen	— (the app has no administration)

They were split into three maps for a practical reason: a single diagram containing every screen came out illegible, because the edges between zones forced the layout engine to reorder the boxes and the result read bottom-up.

Rendered images

Each diagram also ships as a PNG, ready to drop into the document:

File	Diagram
`web-navigation-map-1.png`	General flow of the web application
`web-navigation-map-2.png`	Dashboard and home detail
`web-navigation-map-3.png`	Auxiliary screens of the web application
`web-navigation-map-4.png`	Administration (ADMIN role)
`mobile-navigation-map-1.png`	General flow of the mobile application
`mobile-navigation-map-2.png`	Main panel and home detail
`mobile-navigation-map-3.png`	Auxiliary screens of the mobile application

2. Source of the information

These maps were built by **reading the source code**, not the mockups.

Map data	Project file it came from
Web routes and their protections	`Energy-Monitor-application/src/routes/AppRoutes.jsx`
Web side menu	`Energy-Monitor-application/src/components/layout/MainLayout/Sidebar/Sidebar.jsx`
Homes accordion	`Energy-Monitor-application/src/components/layout/MainLayout/Sidebar/NavHomes.jsx`
Home detail tabs	`Energy-Monitor-application/src/features/DetailHome/Consumption/Consumption.jsx`
Mobile routes	`Energy-Monitor-Mobile/src/app/`

Map data	Project file it came from
Mobile auth guard	`Energy-Monitor-Mobile/src/components/layout/AuthGate/AuthGate.tsx`
Mobile side menu	`Energy-Monitor-Mobile/src/components/layout/Sidebar/Sidebar.tsx`
Home detail bottom bar	`Energy-Monitor-Mobile/src/components/layout/BottomTabBar/BottomTabBar.tsx`
Mobile detail sections	`Energy-Monitor-Mobile/src/features/homes/screens/HomeDetailScreen/HomeDetailScreen.tsx`

> **Mockups are not the real flow.** Mockups and wireframes describe the visual appearance of each screen; the navigation flow is determined by the declared routes and the implemented menus. That is why a navigation map built from a mockup can show screens the system never mounts, or transitions that never happen.

3. Format

The maps are written in **Mermaid**, embedded inside Markdown documents.

Advantage	Detail
Renders with no setup	GitHub, GitLab, VS Code (with the Mermaid extension), Notion and Obsidian render it automatically
It is text	It is versioned with Git, reviewable in diffs, and editable without tools
It can be exported	With the VS Code Mermaid extension it exports to PNG, SVG or PDF in one click

How to export them as images for the document

Option	Steps
VS Code extension	Install *Markdown Preview Mermaid Support* → open the file → use the export-to-PNG button
Mermaid Live Editor	Paste the content of the ```mermaid block at https://mermaid.live → **Actions** → **PNG**
PlantUML online	Does not apply: Mermaid is not PlantUML

If you need the code in another format

Format	How to get it
Standalone `.mmd`	Copy the content of the ``mermaid block into a file with the`.mmd` extension
draw.io	Export the PNG from Mermaid Live, then use *Insert* → *Image* on a draw.io canvas
PlantUML	Requires rewriting the diagram; say the word and I will convert it

4. How to read the maps

Symbol	Meaning
Rounded blue node	Entry point
Green node	Module or main area of the application
White node	Screen, section or concrete action
Amber node	Navigation guard or state decision
Red node	End of flow: log out or access error
Solid arrow	Direct navigation
Dotted arrow	Return, retry or log out

5. Differences between web and mobile navigation

Aspect	Web	Mobile
Welcome page	Yes	No: it opens on log in
Password recovery	2 routes	3 routes
Account screen	Protected `/account` screen	Own screen with a title
Administration	Yes (`/admin/users`, ADMIN role)	No
Device linking	Web Bluetooth (Chrome or Edge)	Native Bluetooth (BLE)
Side menu	Fixed or collapsible	Animated slide-in layer
Detail sections	Top horizontal tabs	Bottom bar with icons
Total routes	16 + not found page	13

6. Observations

#	Observation	Detail
1	Solved: the mobile `/homes` route	It now redirects to `/dashboard`
2	Solved: the "Add account" option	It no longer appears in the profile menus
3	Solved: web catch-all route	`*` shows the "not found" page (`NotFound.jsx`)
4	The mobile app has no catch-all route of its own	Expo Router shows its own "screen not found" page
5	Solved: `/account` on the web	It is inside `ProtectedRoute`
6	An ADMIN account in the mobile app	The app does not distinguish administrators; the administration screens exist only on the web

6.1 Status of the mockups against the code

The HTML mockups in `mockup/layout/` were drawn before the latest features. They were not redrawn in this version; the table shows what is missing or out of date.

Screen in the code	Platform	Mockup	Status
Platform users (`/admin/users`): search, table, status and role	Web	—	**Missing** (`mockup/layout/web/admin/users.html`)
Status change and administrator role confirmations	Web	—	**Missing** (`mockup/layout/web/admin/users-confirm-modal.html`)
Administration notifications	Web	—	**Missing** (`mockup/layout/web/admin/notifications.html`)
Administrator side menu and settings (without notifications)	Web	`web/settings/settings.html` (user)	ADMIN variant **missing**
Activity tab and home filter in Notifications	Web and mobile	`web/notifications/*.html`, `mobile/notifications/notifications.html`	Out of date: only three tabs
Terms and privacy window at registration	Web	`web/auth/register-legal-modal.html`	Current
Terms and privacy window at registration	Mobile	—	**Missing** (`mockup/layout/mobile/auth/register-legal-modal.html`)

Screen in the code	Platform	Mockup	Status
Persistent password rules hint	Web and mobile	`*/auth/register.html`	Check that it shows the persistent hint
Transfer ownership (confirmation with checkbox)	Web and mobile	`*/home-detail/*users.html`	Modal **missing**
Delete home typing its name	Web and mobile	`web/home-detail/owner/home.html`, `mobile/home-detail/home-detail-home.html`	Modal **missing**
Bluetooth linking (step wizard)	Mobile	`mobile/home-detail/home-detail-link-device.html`	Out of date: showed the code typed by hand
Change Wi-Fi network and edit device	Web and mobile	—	**Missing**
Delete a Google account with a code	Web and mobile	`*/account/account-delete-modal.html`	Out of date: only asks for the password
Page titles on Settings and My account, icons instead of emojis	Mobile	`mobile/settings/settings.html`, `mobile/account/account.html`	Out of date
Support with administrator contacts and footer	Web	`web/landing/support.html`	To review
`mobile/dashboard/homes.html`	Mobile	Exists	Obsolete: the `/homes` route is no longer a screen
