Navigation map — Web application

Project: Electricity Consumption Monitor — EnergyMonitor **Record:** 3145556 — Software Analysis and Development (ADSO), SENA CIES Regional Huila **Version:** 1.1 (October 27, 2026: administrator role, guest, permission and user-only guards, activity notifications, legal window and account inside the protected zone)

---

1. Map 1 — General flow

Walks through the application from entry to exit, showing the public zone, the authentication guard and the side menu destinations.

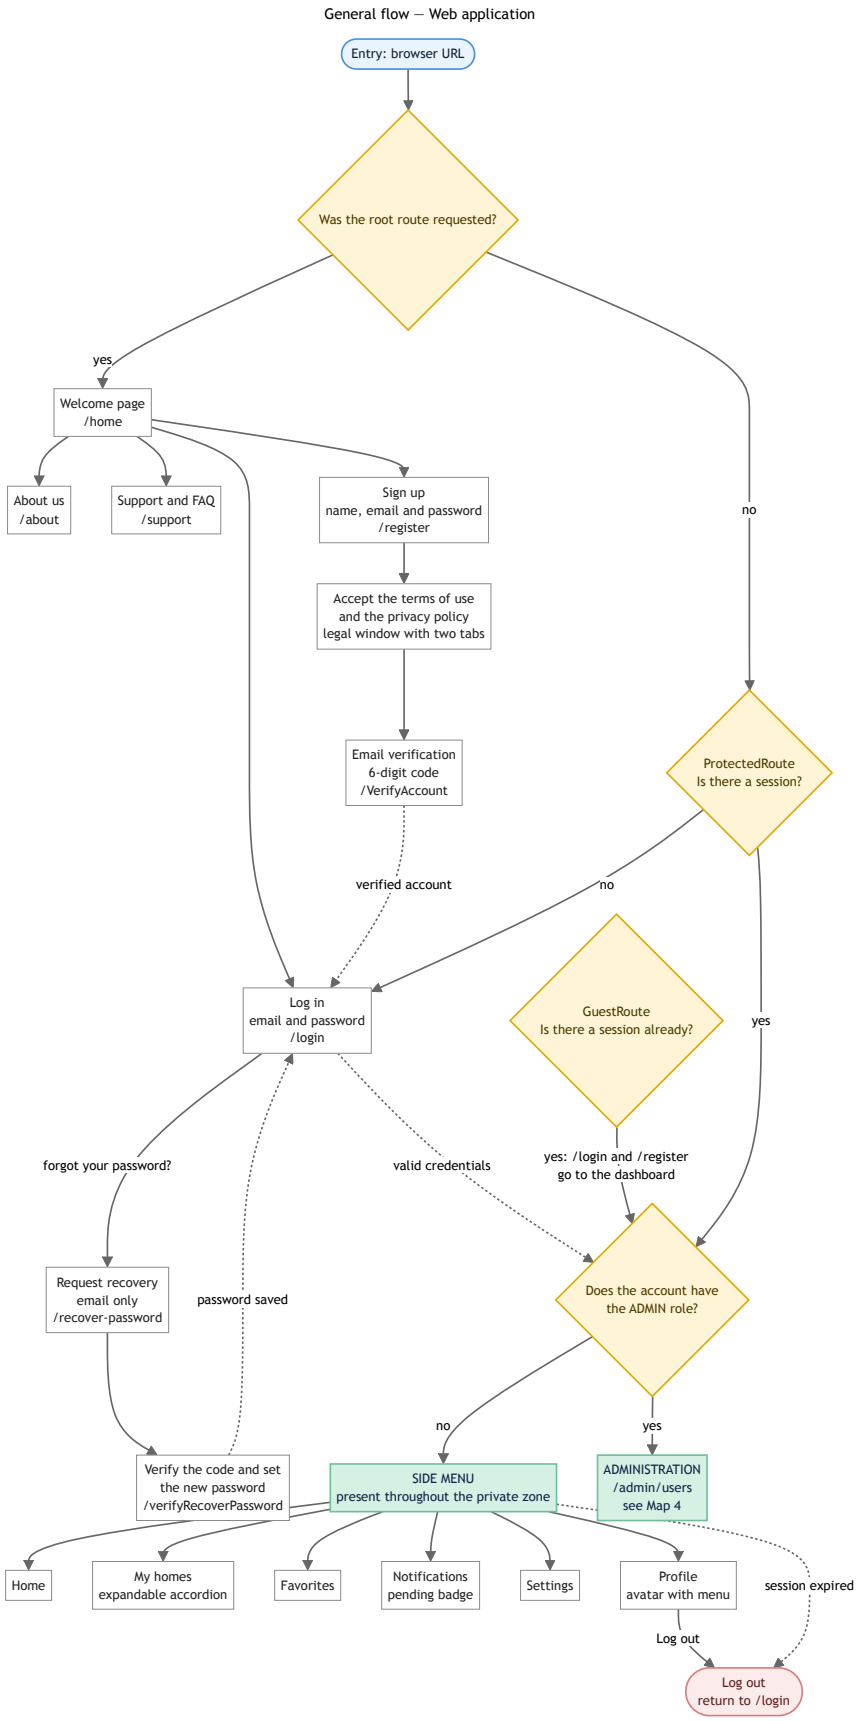

Figure 1. Download PNG image

2. Map 2 — Dashboard and home detail

Details the main screen and the six sections of a home detail, with the actions that the role allows.

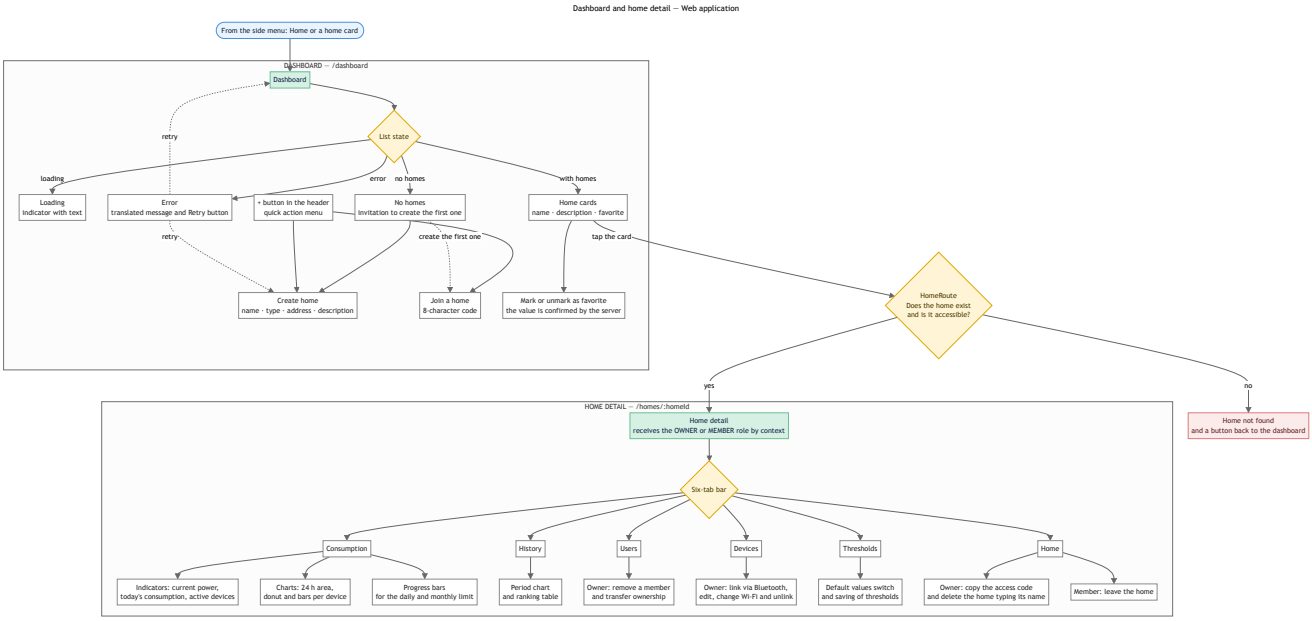

Figure 2. Download PNG image

3. Map 3 — Auxiliary screens

Details the favorites, notifications, settings and account screens, the latter opening as a modal.

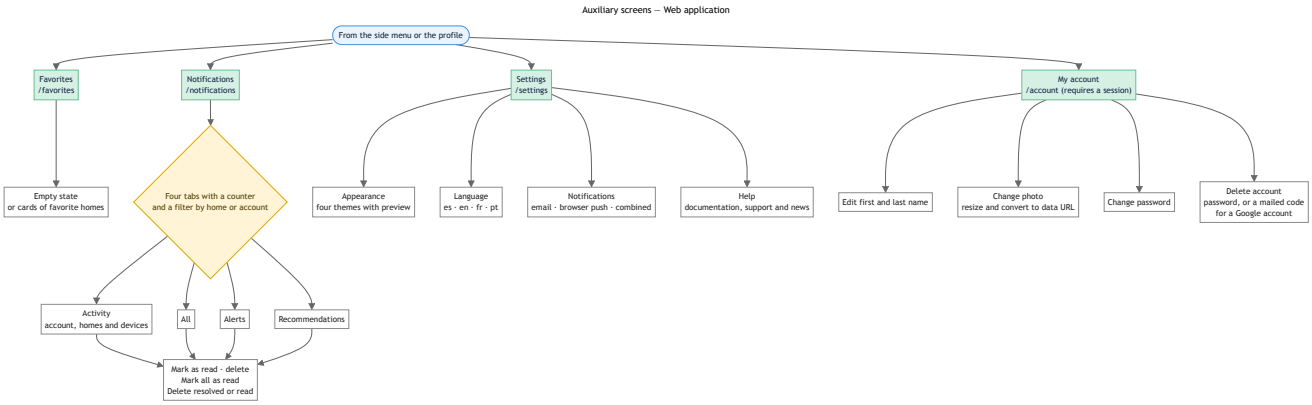

Figure 3. Download PNG image

3.1 Map 4 — Administration (ADMIN role)

An account with the global `ADMIN` role only sees the administration, its notifications, the settings and its account. `UserOnlyRoute` sends it back to `/admin/users` when it tries to open the home screens, and `RequirePermission` sends to the dashboard whoever lacks `USER.READ`.

4. How to read the maps

Symbol	Meaning
Rounded blue node	Entry point
Green node	Module or main area of the application
White node	Screen, section or specific action
Amber node	Navigation guard or state decision
Red node	End of flow
Solid arrow	Direct navigation
Dotted arrow	Return, retry or log out

5. Navigation control points

Control point	Behavior
Redirection of `/`	The root route sends to `/home`; there is no intermediate screen
`GuestRoute`	With an active session, `/login` and `/register` go straight to the dashboard
`ProtectedRoute`	Without a session, every private route (including `/account`) redirects to `/login`
`UserOnlyRoute`	An ADMIN account opening `/dashboard`, `/homes/:homeId` or `/favorites` goes back to `/admin/users`
`RequirePermission`	Without the `USER.READ` permission, `/admin/users` redirects to `/dashboard` (the API answers 403 anyway)
`HomeRoute`	If the home in the URL does not exist or is not accessible, it shows «Home not found» with a back button
`OWNER` or `MEMBER` role	The detail receives the role through the route context and shows or hides the management actions
Expired session	The HTTP client clears the session and sends the browser to `/login` a single time

Control point	Behavior
Favorite	The value returned by the server is applied, not a local toggle

6. Zones and routes

Zone	Routes	Screens
Public	`/home`, `/about`, `/support`, `/login`, `/register`, `/VerifyAccount`, `/recover-password`, `/verifyRecoverPassword`	8
Private (user)	`/dashboard`, `/homes/:homeId`, `/favorites`	3
Private (user and administrator)	`/notifications`, `/settings`, `/account`	3
Administration	`/admin/users`	1
Any other route	`*`	Not found page
Total		**15 +** `*`

Note: `/account` is now **inside** `ProtectedRoute`: without a session it redirects to `/login`.

7. Private screen layout

The private screens share the same layout:

- **Left column — side menu:** Home · My homes · Favorites · Notifications · Settings
- **Lower left column — profile:** avatar with My account and Sign out (ADMIN account side menu: Administration · Notifications · Settings)
- **Right column — header:** breadcrumbs and the screen action button
- **Right column — body:** the screen content, with its own scrolling

At 1024 px or less, the side menu becomes a sliding layer with a darkened backdrop and a fixed menu button.
