Full Suite Summary (backend)

Version 1.1 of the test plan. No environment variables or credentials.

Final result (October 20, 2026): full `./mvnw test`, test profile, against MySQL 8.4: **1131 tests, 0 failures, 0 errors, 0 skipped**. It includes the 37 classes that were “To run (MySQL)” in version 1.0.

Continuous integration: the required `Tests` check of the `Backend CI/CD` workflow (GitHub Actions) runs the same suite against a `mysql:8.4` service container on every pull request and push to `dev` and `main`. Run on `main`, commit `90ae5ef` (October 19, 2026): `Tests` green in 23 min 9 s.

Per-module distribution of the most recent local Surefire report (`target/surefire-reports`, October 16, 2026). 7 tests were added between this report and the final run.

Module	Classes	Run	Passed	Failed	Skipped	Time (s)
(root)	8	25	25	0	0	305.0
alert	10	52	52	0	0	81.9
device	6	48	48	0	0	77.0
home	28	179	179	0	0	68.8
measurement	13	75	75	0	0	78.8
notification	13	93	93	0	0	199.0
recommendation	5	26	26	0	0	62.8
security	49	626	626	0	0	773.9
Total	132	1124	1124	0	0	1647.2

Failures: none. DEF-01 and DEF-02 are closed (see Table 35 of the test plan).

New classes since version 1.0: PushDeviceTest (5), ExpoPushSenderTest (9) and PushDevicePersistenceTest (7), in the notification module.

Coverage: JaCoCo is not in the `pom.xml`; there is still no coverage report.
