Test Evidence

Version 1.4 (current status)

Date: October 28, 2026. The repositories that received the latest features change; the rest stays as in version 1.3. `main` commits and totals:

Repository	Branch	Commit	Note
en-monitor-security-service	main	`de52c95`	774 tests
en-monitor-home-service	main	`6a4e396`	260 tests
en-monitor-notification-service	main	`ecdbc0a`	235 tests
en-monitor-alert-service	main	`0e65430`	128 tests
energy-monitor-web	main	`27ad9f0`	44 files and 253 tests
energy-monitor-mobile	dev	`8b5edc0`	78 unit tests

Version 1.3

Date: October 28, 2026. With the complete migration the core service was retired and every service has its own repository and suite. `main` commits (the ones deployed to production that day) and the totals of each suite, all green:

Repository	Branch	Commit	Note
en-monitor-api-gateway	main	`0b2c164`	API gateway; 69 tests
en-monitor-security-service	main	`f57c76b`	Security service; 773 tests
en-monitor-device-service	main	`06c1bdc`	Device service; 129 tests
en-monitor-measurement-service	main	`8a9b544`	Measurement service; 151 tests
en-monitor-home-service	main	`f424083`	Home service; 260 tests
en-monitor-notification-service	main	`7b10398`	Notification service; 234 tests
en-monitor-alert-service	main	`f050b56`	Alert service; 119 tests
en-monitor-recommendation-service	main	`aeeeec5`	Recommendation service; 71 tests
energy-monitor-web	main	`698d4c9`	Web application; 38 files and 228 tests
energy-monitor-mobile	dev	`1e4109b`	78 unit tests in 8 suites, `tsc` and `expo lint` without errors (mobile/static-verification.md)
energy-monitor-infra	main	`ceb1543`	End-to-end tests on the local stack: `device-flow` (24), `measurement-flow` (28), `alert-flow` (36), `activity-flow` (60) and `account-deletion-flow` (12)

As in version 1.2, no Surefire reports or logs are attached: the totals are the ones each suite reported. The manual test protocol of the mobile application (MOV-01 to MOV-12) is in the test plan and is still to be run on a device.

Version 1.2

Date: October 24, 2026. From this version on the system is no longer a single backend: the API gateway and the security, device and measurement services have their own repository and their own suite, and `energy-monitor-backend` keeps home, alert, recommendation and notification. `main` commits in production and the totals of each suite, all green:

Repository	Branch	Commit	Note
en-monitor-api-gateway	main	`c070cec`	API gateway; 57 tests
en-monitor-security-service	main	`334691a`	Security service; 660 tests (run of October 22, 2026)
en-monitor-device-service	main	`f8b8526`	Device service; 130 tests
en-monitor-measurement-service	main	`ee2cb81`	Measurement service; 151 tests
energy-monitor-backend	main	`aa9a713`	Core service (home, alert, recommendation and notification) and firmware; 481 tests, `ModularityTests` green
energy-monitor-web	main	`e59becee`	Web application
energy-monitor-mobile	main	`894b65a`	No automated tests
energy-monitor-infra	main	`eaf961b`	End-to-end tests on the local stack: `e2e/device-flow.sh` (21/21) and `e2e/measurement-flow.sh` (25/25)

No Surefire reports or logs are attached for this version: the totals are the ones each suite reported. The files under `backend/` and `web/` are historical evidence of versions 1.0 and 1.1, when `energy-monitor-backend` contained all seven modules.

Version 1.1

Run date: October 20, 2026.

Repository	Branch	Commit	Note
energy-monitor-backend	main	`90ae5ef`	Core service and firmware; full suite against MySQL (1131 tests, 0 failures), also in the `Tests` check of GitHub Actions
energy-monitor-web	main	`2b41cb3`	Web application; 141 tests passed, also in the `Tests and build` check
energy-monitor-mobile	dev	`4ebccfb`	No automated tests
energy-monitor-infra	main	`7324110`	Compose files, scripts and Nginx template validated in the `Validate compose and scripts` check
energy-monitor-docs-final	dev	`00806c6`	Final documentation (this document)

- backend/full-suite-summary.md
- web/vitest-summary.md (section “Version 1.1 Run”)

Version 1.0 (historical)

Run date: October 14, 2026.

Repository	Branch	Commit	Note
energy-monitor-backend	dev	`d03bbd3`	Core service; the tree had 4 new uncommitted test classes
energy-monitor-web	dev	`e6edc12`	Web application
energy-monitor-mobile	dev	`a3f6875`	No automated tests
devices	dev	`57417a7`	Repository now retired: the firmware moved to the backend and the broker to `energy-monitor-infra`
energy-monitor-docs-final	dev	`2af09ab`	Final documentation (this document)

- backend/surefire-summary.md
- backend/log-run-without-db.md
- backend/log-new-tests.md
- web/vitest-summary.md

There is no coverage evidence: JaCoCo is not in the backend `pom.xml` and the web defines no coverage script.

Spanish version: ../ES/README.md
